2 Check the date 4

3 Tell a few adults 5

4 Know the signs 6

5 Stay with them 7

Chapter One

Pick one spot

Keep the overdose-reversal medicine where every adult can reach it. Do not lock it up.

Chapter Two

Check the date

Look at the expiration date before guests arrive. Replace it if it is close.

Chapter Three

Tell a few adults

Pull aside two or three adults who will be there all day. Tell them where it is and to call 911 first.

Chapter Four

Know the signs

Someone will not wake up, breathes slowly or has blue lips. That is the moment to act.

Chapter Five

Stay with them

The CDC says to stay until help arrives or for at least four hours. More than one dose may be needed.

Epilogue

A few minutes can save a life.

Most gatherings will never need the plan. Making one is a quiet way to look after everyone at the table.
