4 Testing comes first 6

5 A plan you choose together 7

Chapter One

Care that fits a commute

Summerville adults can be seen by secure video, so an evaluation fits into a workday with no extra driving.

Chapter Two

It started before 12

For an adult diagnosis, symptoms must have started before age 12. Old report cards and family memories can help.

Chapter Three

A full first visit

Your provider reviews your symptoms, your history and conditions that can look like ADHD, such as anxiety and poor sleep.

Chapter Four

Testing comes first

If you have never had a formal evaluation, testing is needed before treatment. It is self-pay and done on your own computer.

Chapter Five

A plan you choose together

Your plan is decided jointly with you and can include counseling on routines and organization.

Epilogue

Focus can be part of the plan.

Many adults spend years wondering why focus feels harder for them. A careful evaluation gives you real answers and a plan built around your life.

Ready to write your next chapter?

Start an ADHD evaluation by video from Summerville.
