5 Same provider, either way 7

Chapter One

What virtual care means

You and your provider connect by video, phone, text or email, often called telehealth.

Chapter Two

What can happen by video

Assessment, diagnosis, treatment planning, talk therapy and regular check-ins can all be offered virtually.

Chapter Three

Who it can help

Virtual care can be effective for anxiety, ADHD, bipolar disorder, depression and PTSD.

Chapter Four

Why people choose it

No travel, flexible scheduling and a less intimidating setting can make it easier to start.

Chapter Five

Same provider, either way

We see adults 18 and older by secure video anywhere in South Carolina, with the same provider in West Ashley.

Epilogue

Your first visit, from home.

Our front desk verifies your telehealth benefits before the first visit. Then all you need is a private spot and a steady connection.

Ready to write your next chapter?

Visits by video across South Carolina or in West Ashley.
